CSE111 Final Preparations

Our main four topic is :

1. Encapsulation
2. Static variables and methods
3. Inheritance and its properties
4. Polymorphism

To understand this concept we need to understand these basic stuff -

1. instances variable
2. Class
3. objects
4. constructor & constructor overloading
5. method and method overloading
6. Multiclass
7. pass by reference

After understanding the basics of these concepts, we need to understand private variables, getter() & setter() methods to access private properties.

For the basic of Encapsulation please watch these class -
Lecture 17 - 20
https://youtube.com/playlist?list=PLvr0Ht-XkB_3QPWYBje6NqEs3QLj_0vpf&si=_j0k5fB-B2VUsM4j

For the basic of static please watch these class -
Lecture 21 - 25
https://youtube.com/playlist?list=PLvr0Ht-XkB_3QPWYBje6NqEs3QLj_0vpf&si=_j0k5fB-B2VUsM4j

Watch this class for encapsulation and static variables -

1. https://youtu.be/EQfJFjI3-c8?si=3ZNs4SmBJAfwYi8M
2. https://youtu.be/5EmaO_MiTUI?si=Lh12zfzqWak0kmVH

These 2 classes will help you to understand how to solve problems in encapsulation with static . In this class, I solved a very easy problem for your understanding.

Now we need to solve 2 more problems for gaining confidence in Encapsulation and static .

1. Standard problem from Encapsulation and static for Final

Enc_Static, multi_Class_pass by reference, Class, Objects for Final

2. Set A and Set B problem and solution for Encapsulation

Set A : CSE111 Lab Exam 03 [SET A].pdf

Set B : CSE111 Lab Exam 03 [SET B].pdf

Solution : CSE111 Lab Exam 03 Solution.pdf

Problem solving class on SET B :

CSE111 ||| Static - Lab Problem solutions || BRACU

Standard problem solving class from Encapsulation and static for Final :
